Supplemental TABLE for Keating and Kuo (submitted).

Means for all measures by language and sex. Means are averages of speaker means for each group. All measures are from the STRAIGHT method of pitchtracking, and are in Hz except for variables names including “ST”, which are in semi-tones. In the “Overall” measures for the rising and falling sweeps (Tables A and B), minimum values (XMin, MeanMin in MeanRange) came from falling sweeps, while maximum values (XMax, MinMax in MeanRange) came from rising sweeps. For the connected speech passages (Tables D and E), there is just one Min and one Max per speaker, so no separate MeanMin/MeanMax or XMin/XMax.

TABLE A – Prompted sweeps

<table>
<thead>
<tr>
