Myers 1991b\textsuperscript{1} study questions
To be turned in Tuesday, Nov. 16 in class

Questions
1. On p. 383, Myers suggests that the strong domain hypothesis be extended from rules to restrictions on segments and syllables. Given the other Myers paper you read, no extension is really needed, since restrictions are enforced by rules. What would be the rule in Shona case, and at what level, if any, is it turned off?
