

# Supplemental Materials to “Balinese stem phonotactics and the subregularity hypothesis”

We include five files mentioned in the main text:

## 1. Data

*BalineseData.xlsx*

See §3 of paper. The Balinese stems we analyzed.

## 2. Main grammar

*PrimaryAnalysis.xlsx*

See §4.1. Candidate clusters, constraints, weights, significance testing.

There are fewer data in this file than in #1, due to (a) removal of duplicates (same stem, different affix); (b) we skipped analysis of triple clusters.

## 3. Splitting constraints between two different strata: significance testing

*SplittingConstraintsByStratum\_StatisticalTesting.xlsx*

See fn. 8, §4.5

## 4. Precautionary analysis: include 72 unigram constraints

*LargeGrammarWithUnigramConstraints.xlsx*

See §4.6

## 5. Precautionary analysis: model with homorganic consonant avoidance

*OCPControlTest.xlsx*

See §4.6
